

WinnTCG

Grading report — for the owner of this card

Mega Delphox ex

WT-1JXZ-G439

9

MINT

How this grade was reached

A strong card. Every axis landed on the same number. Final grade: **9 (Mint)**.

Four axes are graded separately. The overall grade is computed from them, never typed over them. Centering is measured rather than judged, so it is shown as geometry; the other three carry the grader's reading of the card.

CENTERING 9

MEASURED, NOT ESTIMATED

FACE	LEFT / RIGHT	TOP / BOTTOM	METHOD	GRADE
front	57.4 / 42.6	52.2 / 47.8	measured by the grader	9
back	55.4 / 44.6	51.5 / 48.5	measured by the grader	9.5

Ratios are the card's border widths, not an estimate from eye. The grade follows a fixed tolerance table, so the same measurement always gives the same number.

CORNERS 9

The card is photographed inside a clear soft sleeve, so every corner is seen through plastic that rounds and blurs the tip; no whitening, fraying or rounding is visible on either face, but I cannot resolve the actual corner points or check them from the side. The 9 reflects clean-looking corners with the sleeve preventing verification of the last half point.

EDGES 9

Missing here is a sleeve-free, raking-light view of the four edges: the penny sleeve's own crimped border sits right where the card edge is on both shots, so faint edge whitening or nicks along the blue back border would be hidden. What is visible shows dark, unbroken borders with no chipping, hence 9 rather than a confident 10.

SURFACE 9

1 ON THE FRONT · 1 ON THE BACK

The whole front is a full-art holo shot under diffuse overhead light with broad glare bands across the foil, so fine scratches, print lines and loss of gloss cannot be ruled out; the back shows a clean, evenly printed swirl with only sleeve reflections. Graded 9 as a cautious reading of an apparently unmarked but unverifiable holo surface.

How it was graded

1. **Graded in hand.** The card was on our bench, and we photographed it front and back under controlled light. The photographs show which card this is and where anything we marked sits on it.
2. **Centering measured.** The border widths were measured by the grader, who drew the border lines by hand, and a fixed table turns the measurement into a grade. The same split always gives the same number.
3. **Corners, edges and surface read.** An AI takes the first pass on each. A person confirms or overrides every sub-grade before anything is recorded, and pins any mark they find on the photograph.
4. **The overall grade is arithmetic.** Nobody types it. The sub-grades make a score out of 1000, and the grade is that score over a hundred, rounded to the nearest half point.

The four sub-grades are averaged, each counting equally.

> 900 out of 1000 ÷ 100 = 9 rounded to the nearest half point = **9**

Centering, in detail

Each face is measured twice: left against right, and top against bottom. The wider of the two splits is the one that counts, and the table below turns it into a grade.

FACE	LEFT / RIGHT	TOP / BOTTOM	WIDER SPLIT	TABLE RUNG	GRADE
front	57.4 / 42.6	52.2 / 47.8	57.4 / 42.6	within 60 / 40	9
back	55.4 / 44.6	51.5 / 48.5	55.4 / 44.6	within 60 / 40	9.5

A card is only as well centred as its worse face. Here that is the front, so centering is 9.

FRONT: WORST SPLIT	GRADE
52 / 48	10
55 / 45	9.5
60 / 40	**9** THIS CARD
65 / 35	8.5
70 / 30	8
75 / 25	7
80 / 20	6
85 / 15	5
90 / 10	4
95 / 5	2
any split	1

BACK: WORST SPLIT	GRADE
55 / 45	10
60 / 40	**9.5** THIS CARD
65 / 35	9
70 / 30	8.5
75 / 25	8
80 / 20	7
85 / 15	6
90 / 10	5
95 / 5	3
any split	2

The front is held to a tighter split than the back at every grade.

Corners, at fixed magnification

Each corner is shown over a 9mm square at **30 pixels per millimetre** — the same magnification on every card this bench grades, so a corner here means what it meant on the last one. These are crops of the photographs above, not separate shots.

FRONT

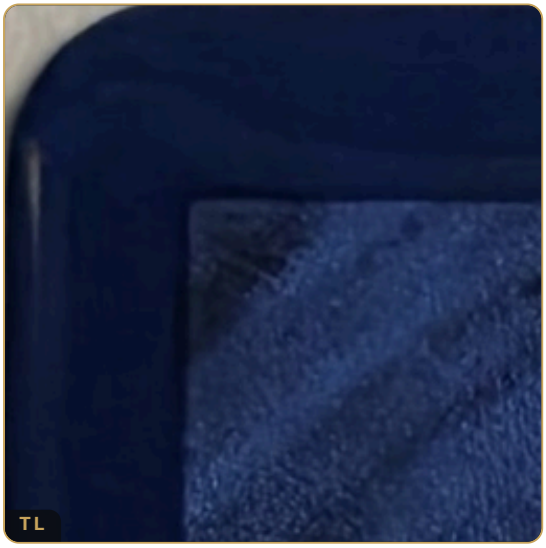

BACK

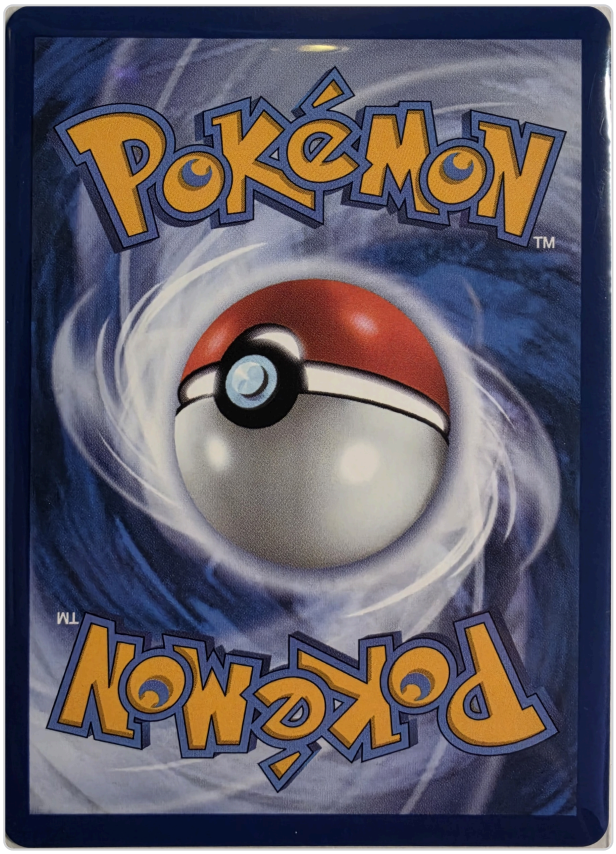

What the grader marked

Numbered pins are where a person looked and found something. They are placed by hand on the photograph, to show where on the card each one is.

FRONT — 0 MARKS PLACED BY THE GRADER

BACK — 0 MARKS PLACED BY THE GRADER

Also observed

Recorded during the first pass and reviewed by the grader. These carry no position — they describe a region, not a point, which is why they are not pinned above.

- **front · holo scratch** FAINT
  Faint short light streaks across the holo in the artwork near the Delphox muzzle; indistinguishable from foil sparkle at this resolution and lighting.

- **back · dent** FAINT
  Small bright pinpoint highlight in the blue swirl above the Pokemon logo, top-centre; could be a tiny surface dent catching light or just a reflection off the sleeve.

Card details

A card of this name and number, out of **84**, exists in the public card catalogue — **Pitch Black**, Double rare. The details on this certificate match it.

> **This is not a test of authenticity.** It confirms the card is the card it claims to be. A good counterfeit of a real card would match exactly the same way, and the tests that would settle it (light through the core, weight, thickness, surface texture) are laboratory tests, and WinnTCG does not run them. We had this card in our hands and graded what we could see; that is not a statement that it is genuine.

What this report is, and is not

WinnTCG graded this card **in hand**, on the bench. **The card was in our hands**, and we sealed the case ourselves. We photographed it here under controlled light to show which card is in the case and where anything we marked sits on it. The grade was made with the card in hand, so it rests on more than the photographs in this report can show.

This document is yours. It is not published with the certificate, and the public page shows the grade and the photographs without it.
