Grading report — for the owner of this card

Gengar

WT-6MW3-0BRV

10

GEM MINT

How this grade was reached

A flawless card on every axis measured. Held back by surface, at 9. Final grade: **10 (Gem Mint)**.

Four axes are graded separately. The overall grade is computed from them, never typed over them. Centering is measured rather than judged, so it is shown as geometry; the other three carry the grader's reading of the card.

CENTERING 10

MEASURED, NOT ESTIMATED

FACE	LEFT / RIGHT	TOP / BOTTOM	METHOD	GRADE
front	51.2 / 48.8	51.1 / 48.9	measured by the grader	10
back	50.5 / 49.5	51.5 / 48.5	measured by the grader	10

Ratios are the card's border widths, not an estimate from eye. The grade follows a fixed tolerance table, so the same measurement always gives the same number.

CORNERS 10

Nothing on this axis shows at the magnification the card was graded at.

EDGES 10

Nothing on this axis shows at the magnification the card was graded at.

SURFACE 9

2 ON THE FRONT · 2 ON THE BACK

What is missing here is raking light: the holo front is lit flat and diffusely, so the rainbow banding across the artwork masks any fine scratch, print line or dent, and the pale blooms on the back Poke Ball cannot be separated from lighting hotspots. On what is visible there is no staining, crease, dent or print defect, and gloss appears even, so I place it at 9 rather than higher only because the surface has effectively not been stress-tested by these photographs.

How it was graded

1. **Graded in hand.** The card was on our bench, and we photographed it front and back under controlled light. The photographs show which card this is and where anything we marked sits on it.
2. **Centering measured.** The border widths were measured by the grader, who drew the border lines by hand, and a fixed table turns the measurement into a grade. The same split always gives the same number.
3. **Corners, edges and surface read.** An AI takes the first pass on each. A person confirms or overrides every sub-grade before anything is recorded, and pins any mark they find on the photograph.
4. **The overall grade is arithmetic.** Nobody types it. The sub-grades make a score out of 1000, and the grade is that score over a hundred, rounded to the nearest half point.

The four sub-grades are averaged, each counting equally.

> 975 out of 1000 ÷ 100 = 9.75 rounded to the nearest half point = **10**

Centering, in detail

Each face is measured twice: left against right, and top against bottom. The wider of the two splits is the one that counts, and the table below turns it into a grade.

FACE	LEFT / RIGHT	TOP / BOTTOM	WIDER SPLIT	TABLE RUNG	GRADE
front	51.2 / 48.8	51.1 / 48.9	51.2 / 48.8	within 52 / 48	10
back	50.5 / 49.5	51.5 / 48.5	51.5 / 48.5	within 55 / 45	10

Both faces measured 10, so that is the centering sub-grade.

FRONT: WORST SPLIT	GRADE
52 / 48	**10** THIS CARD
55 / 45	9.5
60 / 40	9
65 / 35	8.5
70 / 30	8
75 / 25	7
80 / 20	6
85 / 15	5
90 / 10	4
95 / 5	2
any split	1

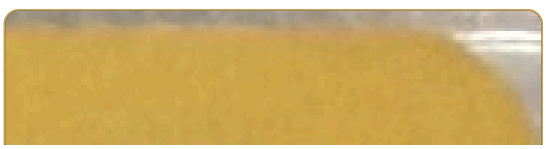

BACK: WORST SPLIT	GRADE
55 / 45	**10** THIS CARD
60 / 40	9.5
65 / 35	9
70 / 30	8.5
75 / 25	8
80 / 20	7
85 / 15	6
90 / 10	5
95 / 5	3
any split	2

The front is held to a tighter split than the back at every grade.

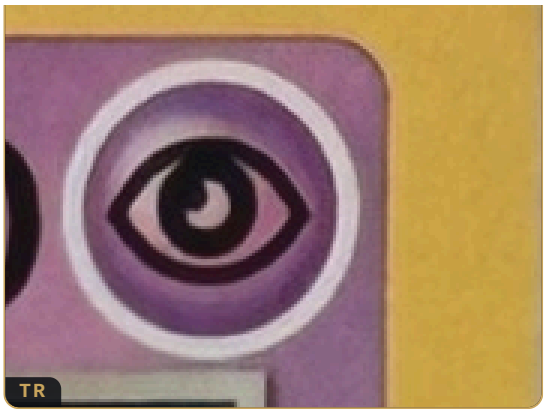

Corners, at fixed magnification

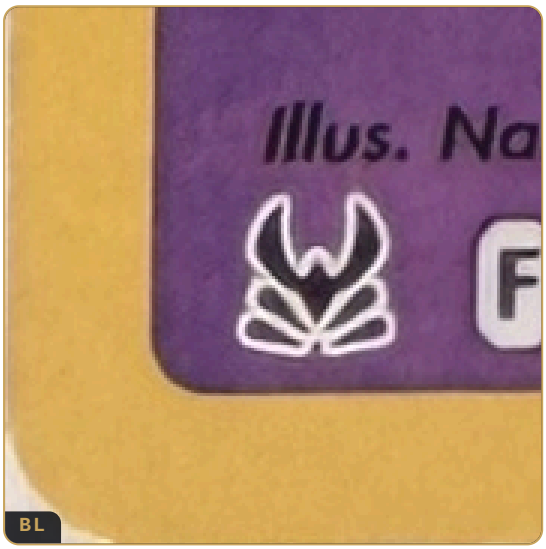

Each corner is shown over a 9mm square at **30 pixels per millimetre** — the same magnification on every card this bench grades, so a corner here means what it meant on the last one. These are crops of the photographs above, not separate shots.

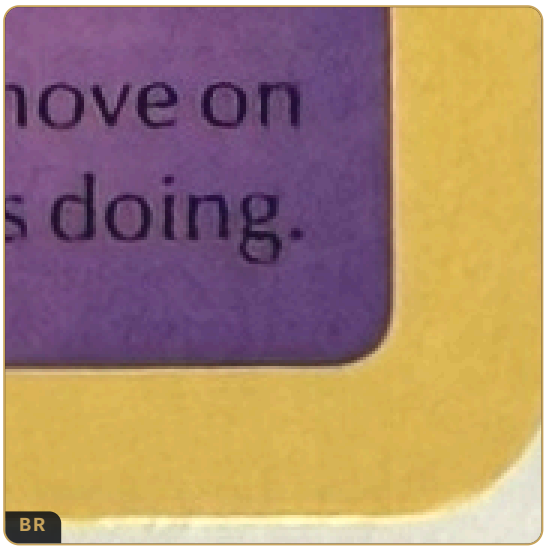

FRONT

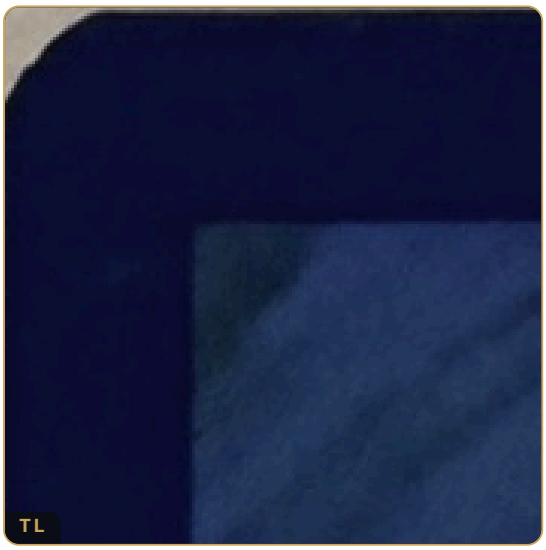

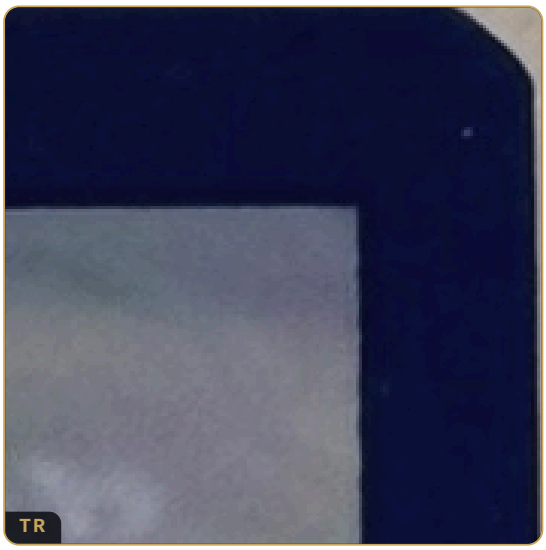

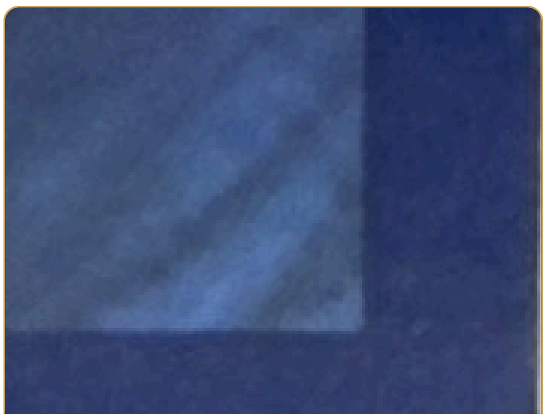

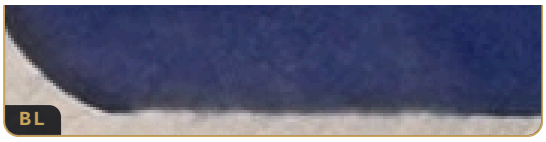

BACK

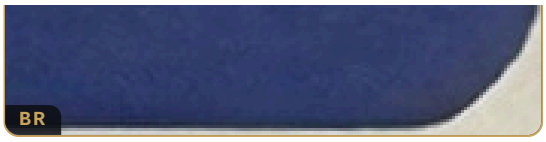

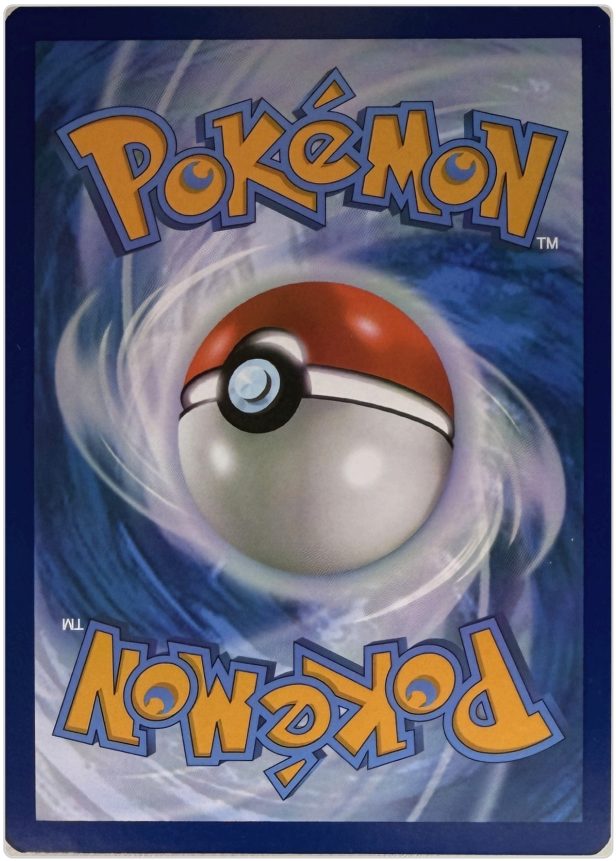

What the grader marked

Numbered pins are where a person looked and found something. They are placed by hand on the photograph, to show where on the card each one is.

FRONT — 0 MARKS PLACED BY THE GRADER

BACK — 0 MARKS PLACED BY THE GRADER

Also observed

Recorded during the first pass and reviewed by the grader. These carry no position — they describe a region, not a point, which is why they are not pinned above.

- **front · whitening** FAINT
  Top-right corner of the yellow border shows a small pale patch roughly 1mm across where the tip looks slightly blunted rather than crisp.
- **front · holo scratch** FAINT
  Diagonal bright bands run across the upper-left artwork; mostly the holo

pattern, but a hairline break in the sheen sits near the chain around 3mm long.

- **back · whitening** FAINT
  Top-right corner of the dark blue border carries a faint light speck under 1mm, visible against the navy but not extending onto the edges.
- **back · surface scuff** FAINT
  Two soft pale patches on the white lower half of the Poke Ball read as possible light gloss disturbance, though they may equally be the lighting hotspots.

Card details

A card of this name and number, out of **196**, exists in the public card catalogue — **Lost Origin**, Holo Rare. The details on this certificate match it.

That printing is illustrated by **Narumi Sato**, published **2022-09-09**. Both come from the public catalogue, not from WinnTCG.

> **This is not a test of authenticity.** It confirms the card is the card it claims to be. A good counterfeit of a real card would match exactly the same way, and the tests that would settle it (light through the core, weight, thickness, surface texture) are laboratory tests, and WinnTCG does not run them. We had this card in our hands and graded what we could see; that is not a statement that it is genuine.

What this report is, and is not

WinnTCG graded this card **in hand**, on the bench. **The card was in our hands**, and we sealed the case ourselves. We photographed it here under controlled light to show which card is in the case and where anything we marked sits on it. The grade was made with the card in hand, so it rests on more than the photographs in this report can show.

This document is yours. It is not published with the certificate, and the public page shows the grade and the photographs without it.
