Grading report — for the owner of this card

Boltund

WT-AXVC-6M9M

9.5

MINT+

How this grade was reached

An outstanding card, a half point from perfect. Held back by corners, at 9. Final grade: **9.5 (Mint+)**.

Four axes are graded separately. The overall grade is computed from them, never typed over them. Centering is measured rather than judged, so it is shown as geometry; the other three carry the grader's reading of the card.

CENTERING 10

MEASURED, NOT ESTIMATED

FACE	LEFT / RIGHT	TOP / BOTTOM	METHOD	GRADE
front	52.0 / 48.0	50.7 / 49.3	measured by the grader	10
back	51.6 / 48.4	51.8 / 48.2	measured by the grader	10

Ratios are the card's border widths, not an estimate from eye. The grade follows a fixed tolerance table, so the same measurement always gives the same number.

CORNERS 9

4 ON THE BACK

All eight corner tips read as sharp and well-formed in these flat scans, with only faint possible lightening at the back bottom-left and top-right tips. Without an angled or raking-light shot I cannot see layer separation or fraying at the tips, so this number assumes the tips are as clean as they look face-on.

EDGES 10

1 ON THE FRONT

Nothing on this axis shows at the magnification the card was graded at.

SURFACE 9

1 ON THE FRONT · 5 ON THE BACK

No print lines, dents, creases or stains are visible on either face, and the back's pattern is clean and evenly inked. Both images are flat, diffuse scans with no raking light, so fine holo scuffing and loss of gloss on the foil window are effectively invisible here and the number could fall if they exist.

How it was graded

1. **Graded in hand.** The card was on our bench, and we photographed it front and back under controlled light. The photographs show which card this is and where anything we marked sits on it.
2. **Centering measured.** The border widths were measured by the grader, who drew the border lines by hand, and a fixed table turns the measurement into a grade. The same split always gives the same number.
3. **Corners, edges and surface read.** An AI takes the first pass on each. A person confirms or overrides every sub-grade before anything is recorded, and pins any mark they find on the photograph.
4. **The overall grade is arithmetic.** Nobody types it. The sub-grades make a score out of 1000, and the grade is that score over a hundred, rounded to the nearest half point.

The four sub-grades are averaged, each counting equally.

> 950 out of 1000 ÷ 100 = 9.5 rounded to the nearest half point = **9.5**

Centering, in detail

Each face is measured twice: left against right, and top against bottom. The wider of the two splits is the one that counts, and the table below turns it into a grade.

FACE	LEFT / RIGHT	TOP / BOTTOM	WIDER SPLIT	TABLE RUNG	GRADE
front	52.0 / 48.0	50.7 / 49.3	52.0 / 48.0	within 52 / 48	10
back	51.6 / 48.4	51.8 / 48.2	51.8 / 48.2	within 55 / 45	10

Both faces measured 10, so that is the centering sub-grade.

FRONT: WORST SPLIT	GRADE
52 / 48	**10** THIS CARD
55 / 45	9.5
60 / 40	9
65 / 35	8.5
70 / 30	8
75 / 25	7
80 / 20	6
85 / 15	5
90 / 10	4
95 / 5	2
any split	1

BACK: WORST SPLIT	GRADE
55 / 45	**10** THIS CARD
60 / 40	9.5
65 / 35	9
70 / 30	8.5
75 / 25	8
80 / 20	7
85 / 15	6
90 / 10	5
95 / 5	3
any split	2

The front is held to a tighter split than the back at every grade.

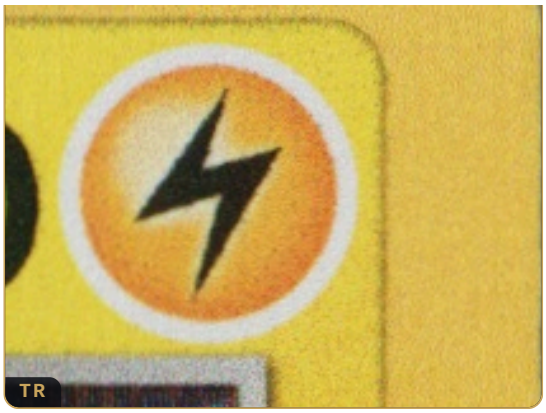

Corners, at fixed magnification

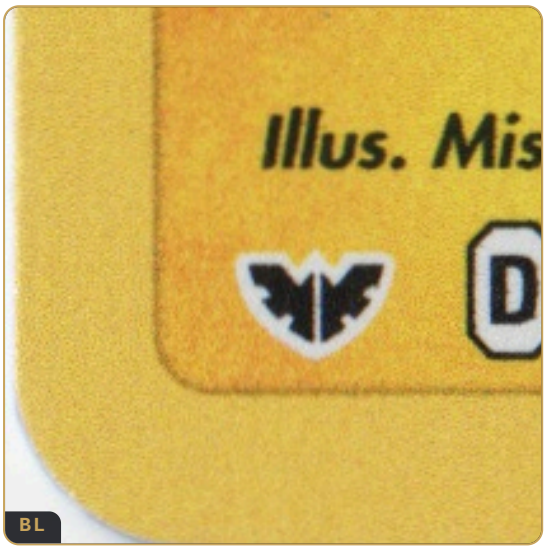

Each corner is shown over a 9mm square at **30 pixels per millimetre** — the same magnification on every card this bench grades, so a corner here means what it meant on the last one. These are crops of the photographs above, not separate shots.

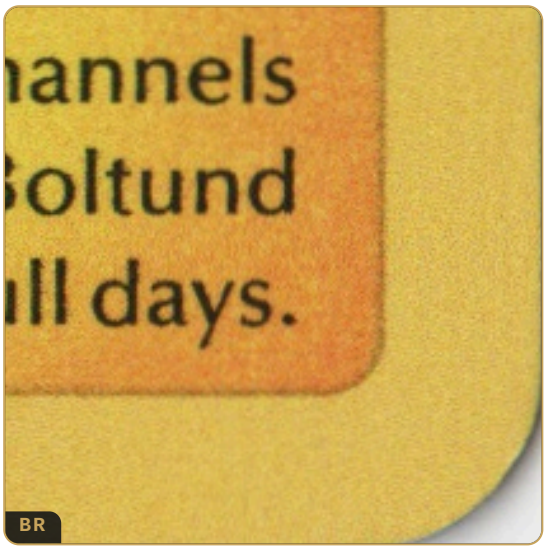

FRONT

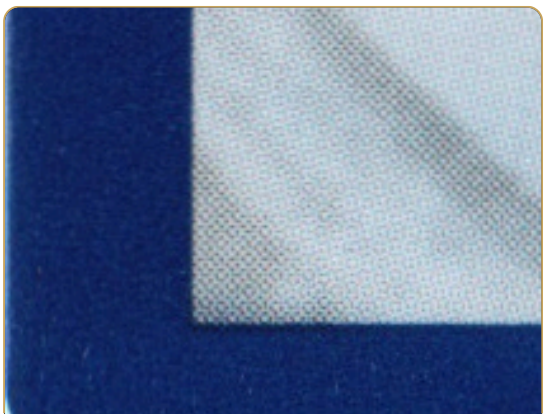

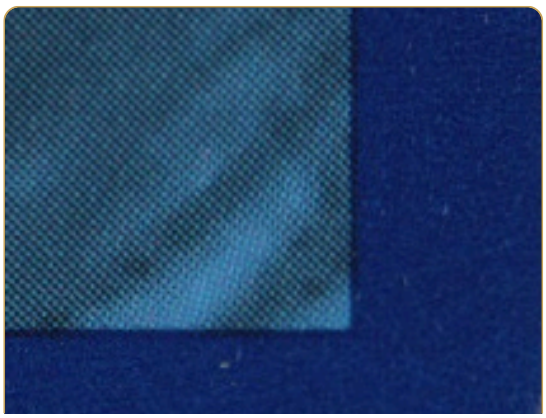

BACK

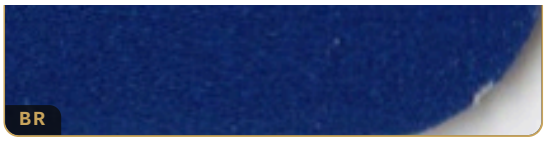

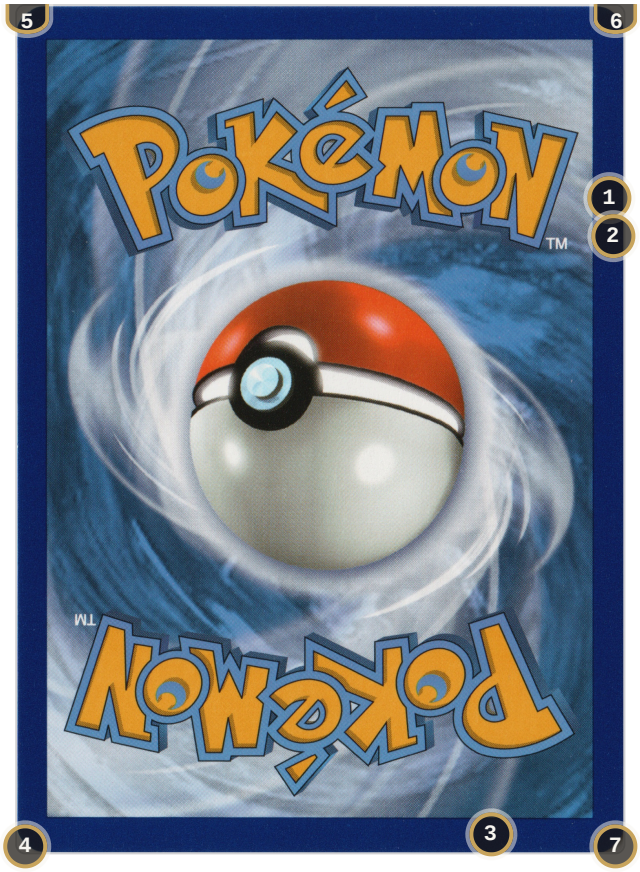

What the grader marked

Numbered pins are where a person looked and found something. They are placed by hand on the photograph, to show where on the card each one is.

FRONT — 0 MARKS PLACED BY THE GRADER

BACK — 7 MARKS PLACED BY THE GRADER

1. **Whitening** FAINT

Also observed

Recorded during the first pass and reviewed by the grader. These carry no position — they describe a region, not a point, which is why they are not pinned above.

- **front · surface scuff** FAINT
  Faint diffuse dulling across the holo foil in the artwork centre, seen as

a slightly cloudier patch in the vertical holo lines.

- **front · edge chip** FAINT
  Top-right edge of the yellow border shows a slightly uneven, lighter line where the border meets the card edge.
- **back · whitening** FAINT
  Faint pale nick in the dark blue border at the bottom-left corner tip, visible as a lighter speck against the navy.
- **back · whitening** FAINT
  Very slight lightening along the outer blue border at the top-right corner, more a softened tip than a chip.

Card details

A card of this name and number, out of **202**, exists in the public card catalogue — **Sword & Shield**, Holo Rare. The details on this certificate match it.

That printing is illustrated by **Misa Tsutsui**, published **2020-02-07**. Both come from the public catalogue, not from WinnTCG.

> **This is not a test of authenticity.** It confirms the card is the card it claims to be. A good counterfeit of a real card would match exactly the same way, and the tests that would settle it (light through the core, weight, thickness, surface texture) are laboratory tests, and WinnTCG does not run them. We had this card in our hands and graded what we could see; that is not a statement that it is genuine.

What this report is, and is not

WinnTCG graded this card **in hand**, on the bench. **The card was in our hands**, and we sealed the case ourselves. We photographed it here under controlled light to show which card is in the case and where anything we marked sits on it. The grade was made with the card in hand, so it rests on more than the photographs in this report can show.

This document is yours. It is not published with the certificate, and the public page shows the grade and the photographs without it.
